# RS100 wireless loudspeaker

- The RS100 wireless speaker allows you to easily add streaming music to any room you want. Just connect it to your Wi-Fi network and then stream from your mobile device. Auxiliary input available for non-streaming use.

- Features DTS Play-Fi® technology to give you the freedom and flexibility to wirelessly play your music at home anyway you want over your existing Wi-Fi network.

- Start with one speaker and add more over time. Up to 16 individual speakers can be connected to a single Wi-Fi network - enough for stereo playback in 8 separate rooms.

- Stream different music to each room from different mobile devices, giving each family member or guest control over what they want to hear in their room.

- Besides accessing your personal music library, the Apple and Android apps have built-in support for many leading online streaming services including Amazon Prime Music, Deezer, KKBox, Pandora®, QQMusic, Rhapsody, SiriusXM®, Songza, Spotify® and TIDAL.[1]

- Unlike many other streaming solutions, DTS Play-Fi provides lossless playback of up to 16-bit/48kHz files; it also has playback support for high-resolution music files up to 24-bit/192kHz.

1. All services may not be available in all regions; certain services may not yet be enabled for all apps; subscriptions may be required. List subject to change.

iPhone shown with DTS Play-Fi app. iPhone not included. Speakers sold individually.

Easily add streaming music to any room
